

Dallas, Texas, March 5, 2012 – Virtual Surveillance, the leader in commercial video surveillance and access control systems, announced today that [Costco](#) has elected to utilize Virtual Surveillance’s video surveillance systems throughout their nationwide chain. Warehouses in Texas will be the first in the rollout to receive the state of the art 32-Channel Network Digital Video Recorders with advanced video analytics.

This state of the art surveillance system employs high resolution cameras with advanced video analytic software to include behavior recognition and forensic analysis. Higher resolution video combined with analytic software enables security personnel to save time, see more details and positively identify people and objects, which is a key consideration in video surveillance applications.

“Security personnel are faced with an overwhelming volume of video and data, making it difficult to pinpoint events of genuine importance” said John Mitchell, VP of sales at Virtual Surveillance. “Our digital surveillance systems offer behavior recognition and forensic analysis to help save time and zero in on relevant and critical data.”

Virtual Surveillance is a Texas-based company, operating nationwide with partners and integrators coast-to-coast. Virtual Surveillance’s video surveillance systems are used for surveillance and protection of multi-site operations. As a direct importer and integrator of digital surveillance and security products, Virtual Surveillance provides extremely competitive pricing while maintaining rigorous product quality and reliability standards.
